The New Ideal Darwin Tulips

ALL ARE TOP-SIZE BULBS

The demand for these Tulips by our customers has increased each year by leaps and bounds. Lovely, gay and sparkling colors added to the fact that they have a very long period of bloom, are responsible for their increasing popularity.

The Ideal Darwin Tulip is the result of the crossing of the common Darwin Tulip with a Wild Tulip or Tulip species made some years ago by Grulleman of Holland. The bulbs finally selected from thousands of seedlings showed the invigorating effect of new blood, resulting in cleaner and clearer colors as well as larger, longer-lasting blooms.

Experts have been quick to see the many new qualities and virtues of the Ideal Darwin Tulips. In the pink shades, varieties such as *The Peach* are outstanding for their soft and lovely tints, as well as ruggedness of bloom.

We are indicating these New Hybrids by placing the word "New" immediately after the variety name. Only limited quantities are available so far. It's therefore best not to wait any longer than necessary to order them. We assure you they will be the most admired flowers in your garden.

Old English COTTAGE TULIPS

ALL ARE TOP-SIZE BULBS

Cottage Tulips are varieties that have been found, for the most part, sequestered in the old cottage gardens of the British Isles. Hybrid Tulips are the result of crosses between the Cottage, Breeder and Darwin Tulips. They flower approximately at the same time as the Breeders and Darwins during the month of May, with the exception of the Far South, where they bloom in April. They are often marked by long, rather pointed petals and thin, wiry stems.

All the Tulips offered in our list are beautiful, presenting a great variety in form and coloring. They are prized for cutting because of their long stems and graceful habits, and are especially adaptable for permanent, hardy flower borders where they should be freely planted in large clumps and in masses.

April 22, 1952

Stebbins-Anderson Company,
Towson, Maryland.
Gentlemen:

I thought that the blooms from the Tulip bulbs I ordered from you a year ago last Fall were beautiful. I never thought, for one minute, that there were any prettier blooms - but how I was mistaken.

The tulips that are blooming now are most magnificent; in fact, I never knew there were such gorgeous varieties. Our living and dining rooms at home (in Nanticoke, Maryland) are literally covered with blooms; besides we have been giving them to neighbors and bringing them up to Baltimore.

I understand that you will have many new varieties next year. If you can beat the ones I have now - it will be wonderful. I certainly am more than pleased and my wife is just crazy about them. I am also so glad that you mixed them up and sent both April and May blooming types.

Believe me, you can look forward to another large order this Fall.

Thanks again.

Yours very truly,

Arthur F. Holston

MULTI-FLOWERED TULIPS

Instead of producing the conventional single stem with one bloom on top, the varieties offered under this heading all grow a strong main stem with from three to six branches half way up the stem, each branch carrying its own flower. Blooms are of good size, gracefully spaced and produce an unusual and great mass of color.

For cutting in particular, they are very decorative and useful, for they lend themselves nicely to arrangement. They are hardy and multiply quite freely in the garden.

How to Plant Fall Bulbs for Spring Flowers

Tulips, common narcissus, daffodils, hyacinths, crocus, lilies, etc. should be planted in specially prepared beds that possess good, natural drainage. The most satisfactory soil for growing bulbs is a fibrous loam well supplied with sharp sand. See planting chart below.

Daffodils Are Easily Grown—Require No Care

There is a saying that Daffodils never let you down. They grow easily and cause you no trouble. Sturdy, gay and colorful, they take the coldest weather in their stride. Anyone can plant them and achieve professional results, so persistent is their growth. They multiply with amazing rapidity, doubling in number each year. Another reason for their popularity is that they harmonize with all other flowers. Every garden, large or small, should have a generous supply of them. Only the finest are offered by Stebbins-Anderson. Smaller kinds are very effective in the rock garden, and for a superb spring picture there is nothing to surpass a large planting of naturalized Narcissus.

NOTE—We have revised the grouping of Daffodils and Narcissus to conform to the Divisions as set forth by The Royal Horticultural Society of England, 1950.

“Colored” means yellow or some other color than white.
“White” means white or whitish.

Years of Experience have taught us the value of SCARLETT'S QUALITY SEED

AUTUMN-MADE LAWNS ARE BEST

Late summer and fall are also the most favorable periods for renovating. Seed sown from August 15 to October 15 invariably grows well; thicker turf develops quickly under the influence of autumn rains and cool nights. You will have fewer weeds and a deeper root system. Dormant seeding after November 15 also gives good results.

INSTRUCTIONS ON LAWN BUILDING AND MAINTENANCE

PREPARATION

For a successful lawn, at least 2 to 4 inches of good quality topsoil possessing the proper organic matter and plant foods for a sturdy growth of grasses is necessary. A good lawn fertilizer for this purpose is bonemeal, which is high in phosphate and should be used at the rate of 2 to 4 lbs. per 100 sq. ft. In addition, a 1-inch layer of well-rotted manure will supply sufficient organic matter. Spread and then spade the above mixture about 4 to 6 inches deep. After being completely broken up and thoroughly mixed, the ground should be raked and rolled. Now you have a good seedbed prepared.

OLD LAWNS

Thin turf and bare spots on old lawns may be raked so that existing grass is not damaged, and then seeded as though making a new lawn. You may also broadcast seed on a late snow in spring. The snow will carry the seed into the open ground.

SOWING

Sow at the rate of 1 lb. to 200 sq. ft., broadcasting half the seed in one direction and the other half at right angles. Carefully rake, making sure not to "bunch" the seed. Roll only if the weather is dry; if you start watering, keep it up. Otherwise seed may sprout and die off before it has rooted. For a good lawn stand this is important. Do not cut before grass is 7 inches high, and set mower to leave a stand of 2 inches.

FERTILIZING

Whether you start the lawn in fall or spring, ample applications of fertilizers have many advantages. Fertilizer forces growth and helps crowd out crabgrasses and weeds. Because of better root strength, the grasses can more easily survive hot, dry summer weather. Apply most fertilizers when the grass is dry, at the rate of 2 to 4 lbs. per 100 sq. ft. Established lawns should be fertilized at least once every two years.
